

Exhibitor: Sauer Compressors Hall: Concourse Stand: CN42

HEAD TO THE CONCOURSE FOR SAUER TECHNOLOGY BOTH BIG AND CLEVER

Every aspect of the oil and gas industry is covered at ADIPEC – either in the many panel discussions or on the exhibition floor.

Among those playing their part in a big way is Sauer Compressors. The German company offers a complete range of air and gas compressors, up to 500 bar final pressure, to meet all the demands of today's industry and offshore market. Check out their stand for a hard to miss example.

"From high pressure compressors for a wide range of oil and gas applications, up to complete CNG filling stations, our state of the art compressors meet the highest standards in quality and reliability," says the firm's spokesman.

On the stand, staff are revealing more

about Sauer CNG compressors and boosters; specially designed for natural gas applications and "the most efficient and safe solution for all kinds of CNG systems".

You can also hear about the HAUG.Mercure series, used for gas recovery and booster compression of gases such as oxygen,

nitrogen, SF6, helium and natural gas, as well as for boosting of compressed air.

"Whether onshore or offshore, Sauer compressors are used in a wide variety of applications in the oil and gas sector," adds the spokesman.

"Designed for 24/7 operation, robust construction allows them to be used (virtually) anywhere and under extremely difficult environmental conditions, with exposure to saltwater, heat or cold, for example.

"Besides our standard products, we also provide complex solutions designed to meet specific requirements. Sauer compressors always do their job reliably and safely, whether on a floating platform in the Gulf of Mexico, the engine room of a ship off the coast of Vietnam or on a heavy goods vehicle in Siberia."
